

Power Link

The Power Link single pole connector series is designed for power distribution systems, offering the ultimate features in safety and reliability under the most severe operating conditions. Typical applications for Power Link include three-phase motors, generators, load banks and lighting distribution panels. Power Link connectors are also suitable for utility companies and heavy industry environments. Power Link connectors are designed and tested to comply with European and US electrical safety standards and specifications. They are available in 400 A and 660 A versions.

- Secondary locking: to prevent accidental disconnection
- Dead front contacts: insulated nylon tip on the live contact prevents accidental handling.
- High impact insulators: glass filled nylon insulators prevent damage due to mishandling and guarantee a high degree of insulation, with maximum resistance to oil, fuel, acids and water.
- Multipoint contact: 23 sprung contact element grants a minimum insertion force and guarantees multiple points of contact, ensuring minimal power loss.
- Integral location keys: each connector type is individually keyed to eliminate the possibility of accidental cross mating.
- Color coded: insulators are supplied as with standard color identification codes.
- Waterproof: IP 67 rated sealing when mated.

The Power Link connector series has permanent integral keys which prevent the accidental connection of dissimilar types (e.g. Earth and line 1). Each connector type has a unique keyed position. Visual identifications are easily made by means of the color insulators.

The sole locking system featuring the connection of the protected contact purely on metal parts

The drain protected connector features a patented double protection to prevent accidental touch of the drain contact under load. The drain contact must be unlocked supplying uniform pressure on the entire Teflon part (by means of the female connector).

The secondary locking pin can be unlocked through the Pin Key using only one hand.
